

Before install driver You need A Raspberry pi 3B with raspbian OS because this Lcd screen works with only raspbian OS

1.First **Download** Txt file from here

Save it to your raspberry pi desktop

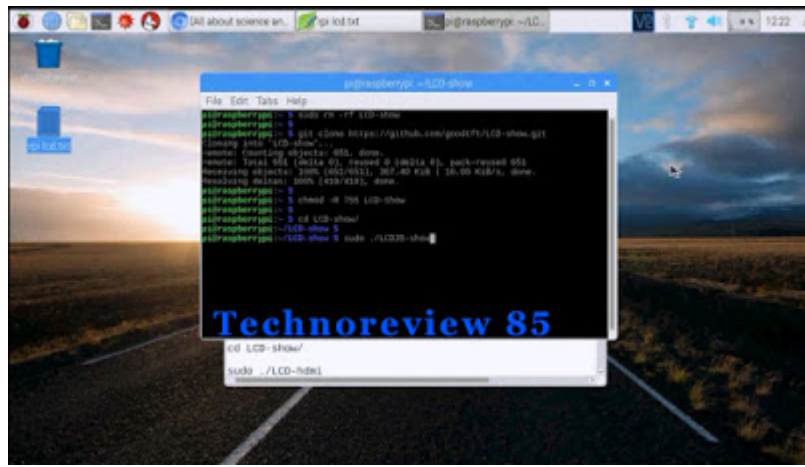

2.Make sure you have internet connection on your Raspi

3.copy upper part of text from downloaded text file & paste it to terminal emulator

Now driver will install & Lcd turn on but HDMI will turn off

LCD & touch is working after automatic restart

4.To turn off Lcd & active HDMI ,copy lower part text from Downloaded text file

paste it to terminal emulator .Now HDMI will active & Lcd turn off

This is full details video for installation driver
